

STOMP BLOX ACCESSORIES

STOMP BLOX RISER MODULAR RISER

FEATURE OVERVIEW

Durable all-steel construction

Simple snap in mounting

Cable pass throughs

Connect up to three on each Stompblox unit

Works with Stompblox and Stompblox Extend

Some effects can get lost or hard to reach when pedalboards get large. Stompblox Risers are modular risers that snap into Stompblox allowing pedals to be elevated for easy access. Each Riser can snap into one of six positions on the Stompblox and up to three Risers can be used on any single Stompblox. Pass throughs on the face and sides of each Riser make it easy to route cables.

Stompblox Risers work with Stompblox and also with Stompblox Extend.

Stompblox Extend is a dual function extension for the Stompblox system. Extend gives users an additional 4.75" of surface area for effect mounting. It also provides space and mounts for power supplies. Most power supplies can be secured with included universal mount tabs, or directly to the mounting tray with screws, zip ties, or velcro.

Stompblox Extend attaches to the back of any Stompblox unit and the included multi-position foot gives extra support where necessary.

STOMP BLOX EXTEND MODULAR EXTENSION

FEATURE OVERVIEW

Durable all-steel construction

Captive screws for easy attach and detach

Cable pass throughs

Universal power supply mounting

Multi-position foot for multiple configurations
